A buying guide for buying stupid shit from China

AliExpress

Aliexpress is owned by the Alibaba Group, a huge fucking online shopping e-commerce company. Aliexpress has very strong buyer protection and it is normally very good at returning your money back to you.

Most buyers on the site are from Eastern Europe because Russians don't have Amazon. The Alibaba group also owns Taobao, which is where most of the shit comes from.

Reviews on Aliexpress don't mean too much as Chinese sellers can just buy reviews and people will leave 5-star reviews just for getting the item in the mail.

Taobao is owned by the Alibaba Group and is basically Chinese eBay. The whole site is in Chinese and all the prices are in Chinese Yuan. You will need a "agent" to buy things from Taobao and if you're not from China, there are four different agents: Youshop, Banggood, Supertech, and Gearbest.

You always have to pay for shipping on Taobao which is based off of the weight of all the items you plan on buying. It's not uncommon to have to pay for shipping to get things like shirts, hats, and bags.

Gearbest is another technology-focused seller that typically labels items as cheap goods so they can get away without paying import taxes or fees. Reviews on products will be removed if it contains anything regarding faulty products that was replaced by DX.

iOffer is home to very low-end replica and knockoff products similarly to Digtate, but unlike Digtate there seems to be no good original products to obtain on iOffer.

DX (dealExtreme) is another technology-focused seller that typically labels items as cheap goods so they can get away without paying import taxes or fees. Reviews on products will be removed if it contains anything regarding faulty products that was replaced by DX.

ebay is originally made for collectors and a way for ordinary people to sell their goods. This is known as C2C, or consumer-to-consumer. It eventually grew to become a marketplace for businesses to sell their goods. Ebay isn't the best and is adopted to get typical Chinese goods at the lowest prices but is widely used by thousands of vendors and provides a large catalogue.

Digitate is another technology-focused seller that typically labels items as cheap goods so they can get away without paying import taxes or fees. Reviews on products will be removed if it contains anything regarding faulty products that was replaced by DX.
